OF THE FILTER

BEFORE THE FILTER CAN BE CLEANED OR WHEN THE SQUEEZE IS NOT

STUFFING-BOX

To adjust, remove the cover provided for the pump.

PUMP

DO NOT CHOOSE THE PELLLET WITHOUT FIRST CONSULTING A SPECIALIST.

After cleaning the pump, the particles must be removed from the water. This is done by passing the water through a filter medium, which will trap the particles and allow the water to pass through.

ENGINE

Removal of the pump is required when the engine begins to overheat. This is usually caused by a lack of cooling water flowing through the engine. The engine must be cooled down before attempting to remove the pump.

ANODE

Corrosion is a serious problem in saltwater systems. This is caused by the electrolysis of the metal in the water. An anode can be used to prevent corrosion by creating a galvanic cell that protects the metal from corrosion.

STUFFING-BOX CLEARANCE

To adjust the stuffing-box clearance, the following steps are necessary:

1. Remove the stuffing-box cover.
2. Use a wrench to adjust the stuffing-box clearance.
3. Reinstall the stuffing-box cover.
